FOR LIFE BALANCE™

CLA Away™

750 mg

• Supports Weight Management*

• With L-Carnitine, Guarana & Green Tea

10% of profits donated for health research

90 Softgels

A Dietary Supplement

SUGGESTED USAGE: As a dietary supplement, take 1-2 softgels 3 times daily.

CLA (Conjugated Linoleic Acid) is a fatty acid naturally found in beef and dairy products. However, due to changes in agricultural practices, today's foods contain less CLA, contributing to its decreased availability in modern diets. Numerous clinical studies have demonstrated CLA's role in the maintenance of healthy body weight through its favorable effect on body composition.* These studies have shown that CLA supplementation can support healthy body fat content while promoting the production of lean tissue without adverse side effects. Furthermore, initial body composition changes with CLA supplementation are maintained over time, indicating its prolonged positive effects. Protocol For Life Balance™ CLA Away™ also contains L-Carnitine, L-Carnitine is an amino acid that is necessary for the transfer of fatty acids into the fat-burning parts of the cell, facilitating energy production from fat. The combination of these two compounds, therefore, can produce a synergistic effect, making CLA Away™ an ideal supplement for weight management.

Do Not Eat Freshness Packet. Keep in Bottle.

CODE P1731

Conjugated linoleic acid (CLA) is a fatty acid found in beef and dairy products. CLA is not made by the human body and therefore must be obtained through foods such as whole milk, butter, beef, and lamb, essentially from animals that graze on grass in pastures. However, due to changes in "cost-cutting" agricultural practices, today's foods are typically low in CLA.

Numerous clinical studies have demonstrated CLA's role in maintaining healthy body weight through its positive effect on body composition. These studies have shown that CLA supplementation can support a healthy body fat content while promoting the production of lean tissue without negative side effects. Furthermore, initial body composition changes with CLA supplementation can be maintained over time, meaning the positive results are long term.

Protocol For Life Balance™ CLA Away™ also contains L-Carnitine. L-Carnitine is an amino acid that is necessary for the transfer of fatty acids into the fat-burning parts of the cell, facilitating energy production from fat. The combination of CLA and L-Carnitine helps to make CLA Away™ an ideal supplement for maintaining a healthy weight. Use in combination with diet and exercise.*

Cautions and Interactions

Some studies suggest that CLA supplementation may have diuretic effects on blood sugar levels. Diabetics using this product should closely monitor serum glucose levels.

Carnitine may affect the body's metabolism of certain pharmaceutical medications such as Doxorubicin and AZT. In addition, the need for Carnitine may be increased by Valproic Acid and Isotretinoin.*

Guaranteed Quality

This is an FDA-regulated dietary supplement that is produced in an FDA- and third party-inspected facility. We are certified for producing dietary supplements and USDA Organic products using Good Manufacturing Practices (GMP). All ingredients are quality tested to meet or exceed specifications. Our quality team goes above and beyond standard quality control to ensure the safety and efficacy of this supplement. We utilize advanced analytical and microbiological testing methods, with capabilities that are state-of-the-art and exceed basic lab requirements.
