Do Not Eat Freshness Packet. Keep in Bottle.

Store in a cool, dry place. Please Recycle.

CODE P2385

Phosphatidyl Serine is a naturally occurring nutrient and essential component of human cell membranes. Although Phosphatidyl Serine can be found in the membranes of all cells, it is especially concentrated in the nerve cells of the brain. In dietary supplement form, it is derived from soybeans and is one of the components within a group known as phospholipids.

Phosphatidyl Serine has several important functions. It can help support nerve cell health and assist in establishing receptor sites in the brain. Phosphatidyl Serine can also help to support cell to cell communication, thereby may enhance memory learning concentration, mood, alertness, sociability and reaction time.

This exceptional, one of a kind product also contains Ginkgo biloba. Ginkgo comes from a very unique and ancient tree. The name "Ginkgo" comes from its older Chinese name, "silver pine," and the Chinese have used Ginkgo for thousands of years. First introduced to Europe in the 1700's, Ginkgo is one of the most researched herbs in the world. It is widely recognized in promoting optimal circulation, healthy cognitive function, free radical destruction and cellular protection.

Cautions and Interactions

Ginkgo is generally well tolerated in the suggested usage range and has an excellent safety profile. There are rare reports of headache, dizziness, stomach upset, nausea, diarrhea, worsening muscle weakness, loss of muscle tone, redness, heart racing, and drowsiness. These symptoms are most commonly associated with the use of Ginkgo. The herb may affect blood pressure and blood clotting time. Significant warnings would appear to be limited to pregnancy and lactation, use of coumadin or other anticoagulants, surgery, anti-inflammatories, and antidepressants. It should be noted that Ginkgo antibodies do not consider Ginkgo to exhibit significant interactions with other medications or to pose a danger during pregnancy and lactation.

Both Ginkgo and PS may affect bleeding time. PS may affect the body's response to heparin, a very strong prescription blood thinner. It is possible that combined use of PS and any drug or supplement that thins the blood could interfere with normal blood clotting.

Guaranteed Quality

This is an FDA-regulated dietary supplement that is produced in an FDA- and third party-inspected facility. We are certified for producing dietary supplements and USDA Organic products using Good Manufacturing Practices (GMP). All ingredients are quality tested to meet or exceed specifications. Our quality team goes above and beyond standard quality control to ensure the safety and efficacy of this supplement. We utilize advanced analytical and microbiological testing methods, with capabilities that are state-of-the-art and exceed basic lab requirements.
