D-Flame™ is an exclusive blend of herbs that work together to help reduce occasional minor pain resulting from occasional over-exercising or stress.*

Turmeric, which is best known for its active ingredient, Curcumin, has historically been used to help support the health of the gastro-intestinal tract. Holy Basil Leaf, considered by many to be the "King of Herbs," has long been thought to balance various processes in the body and to help adapt to occasional stress. Boswellia, a tree resin, is recognized as an herb that helps to support a balanced inflammatory response. Ginger has historically been used to support balanced inflammatory response and to alleviate occasional digestive discomfort. Green Tea, consumed in Asian cultures for over 3,000 years, has historically been thought to contain numerous anti-aging properties. Balcal skullcap contains a number of active flavonoids (chemicals that have a wide range of effects in the body). Two of its flavonoids, baicalin and wogonin, are generally believed to help the body maintain healthy inflammatory responses. Resveratrol is a well-known antioxidant that is found in red grapes, peanuts and mulberries, and is widely used for vascular and immune support.* This Protocol for Life Balance™ product synergistically combines all these ingredients to create an outstanding formula.*

Cautions and Interactions

This product contains some compounds that may interact with NSAIDs, anticoagulants, and anti-platelet medications. Also, consult your physician regarding the use of this supplement prior to having any surgical procedures.

Guaranteed Quality

This is an FDA-regulated dietary supplement that is produced in an FDA- and third party-inspected facility. We are certified for producing dietary supplements and USDA Organic products using Good Manufacturing Practices (GMP). All ingredients are quality tested to meet or exceed specifications. Our quality team goes above and beyond standard quality control to ensure the safety and efficacy of this supplement. We utilize advanced analytical and microbiological testing methods, with capabilities that are state-of-the-art and exceed basic lab requirements.
