Suggested Use

As a dietary supplement, take 1 to 2 capsules once in the morning and once prior to exercise.

SCI•FIT'S® KRE-ALKALYN® 1500 features a patented Creatine in a pharmaceutical delivery system providing maximum stability and absorption. Creatine Monohydrate has been proven through over a decade of research to enhance strength, endurance, and overall athletic performance.* The disadvantages of traditional Creatine Monohydrate are the extremely short term stability, rapid conversion into the bi-product Creatinine when exposed to liquid, and subsequent poor absorption into the bloodstream. KRE-ALKALYN® 1500, which is pH buffered for maximum absorption and stability, solves this dilemma. KRE-ALKALYN® 1500, for the first time, offers the athlete Creatine which is 100% stable, will not break down into Creatinine, and will completely absorb into the bloodstream. In fact, each 1 gram of KRE-ALKALYN® 1500 is equivalent to ingesting 10 grams of Creatine powder allowing the athlete to take far less product while experiencing even more explosive results.*
