

SUGGESTED USAGE: Mix 1 level scoop (40 g) into 16 oz. of water or juice. Consume before, during and after intense exercise for best results. Double this amount if engaging in prolonged exertion of 2 hours or more. Consider taking this product in combination with NOW® Creatine, Beta-Alanine and L-Arginine.

NOW® Waxy Maize is a complex starch derived from Non-GMO corn that is naturally high in amylopectin, a high molecular weight, highly branched polysaccharide. Unlike typical corn starch products, which contain an average of 70-75% amylopectin, NOW® Waxy Maize typically contains 90% amylopectin. Amylopectin is slowly absorbed by the body, and then easily assimilated by muscle tissue, where it is converted into glycogen. Glycogen can then provide a sustained source of glucose for energy. Unlike maltodextrin or dextrose, Waxy Maize supports glycogen resynthesis well after you are finished working out and sustains energy levels throughout the day.*
