

Liquid Ionic Angstrom Silver - 2 fl oz dropper bottle

Silver has been used for thousands of years for health care. It is believed that Silver is a systemic disinfectant and works like a secondary immune system. Since Silver kills only bacteria that is anaerobic or nitrogen breathing, the friendly bacteria in the digestive tract are immune to it due to the fact that they are oxygen breathing (aerobic). Silver can also neutralize sodium fluoride poisoning. Actually we have rediscovered that Silver kills bacteria, which had been known for centuries. When antibiotics were discovered, clinical uses for Silver as an antibiotic were discarded.

Body interruptions without Silver: Anthrax, Gonorrhea, Athlete's foot, Impetigo, Boils, Infection, Candida, Influenza, Cerebro-spinal meningitis, Intestinal trouble, Colitis, Pneumococci, Cystitis, Ringworm, Dermatitis, Shingles, Diphtheria, Staphylococci, Diplococcus, Tuberculosis, Dysentery, Warts, E. Coli, Whooping cough

"Ionized" implies two things, the size and charge of a particle. When a mineral is truly ionized it has a particle size measured in angstroms, (10,000 times smaller than a colloidal Mineral). Colloidal Minerals do not have a charge unique to the mineral because of the process, ionized minerals do have a unique charge that Treasures of the Earth is proud to provide. These factors are critical for optimum recognition and absorption to the body, these factors create a unique bond between body and mineral providing the body and skin to recognize, absorb and utilize these minerals at a cellular level without needing the digestive process. Our ionic minerals are pure mineral in pure water.

Here are three reasons for ionic minerals:

100% Bio-availability: Most nutritional products are absorbed at a rate of 5-20%, so 80-95% of your intake is excreted, (80-95 cents of your dollar just went down the toilet). Ionic minerals are 100% bio-available, meaning right out of the bottle these minerals are cell ready and require no digestion. These minerals begin absorption the second they contact the tissue of the body.

No Toxicity or Storing in the cells: Because of the absorption factor of ionic minerals there is no need for storage by the body, it uses what it needs and excretes the rest.

Good In / Bad Out: Your body is absolutely intelligent about its functions. It knows which substances/minerals are good and which ones are harmful. It also knows the difference between substances that are slightly helpful compared to those that are extremely helpful. The body can differentiate by degree and priority, if the extremely good nutrients aren't coming in through diet and nutritional intake but a mediocre or poor one is, the body will substitute as best as it can. This can cause damage, toxicity, and weakness in cells and tissues. When you replace your intake with exceptional nutrients, the body can then release the substitutes and replace them with the better components. If the body is getting what it needs the healing will happen naturally.

Supplement Facts:

100+- parts per million ionic silver
Suggested serving size: 1 dropper full
Servings per bottle 75+-

Suggested Use:

Normal: 1 dropper full

For further information on suggested servings and use, please consult the "Treasures Of The Earth Mineral Protocols" book.
