MANGAPLEX-E™

Global Range

Count Size: 100 Tablets

1-000-9142-00

Mangaplex-E provides pre-digested nucleic acids from the Anterior Pituitary and Spleen, along with Manganese as a gluconate and Vitamin E as d-alpha tocopherol acetate. Alfalfa and kelp are also included.

These ingredients are combined in a synergistic formula designed to support blood formation, endocrine function and ligament strength and tone.

While the pituitary is a tiny gland, the implications of its functions are spread throughout the entire body. Thyroid stimulating hormone (TSH) controls the activation of the thyroid, which in turn, governs the full spectrum of metabolic functions. Gonadatropin-releasing hormone stimulates gender specific sex hormones in both men and women. Adrenal response also has its origins in this part of the brain.

The genius of this Dr Hanson formula is easy to grasp when it is compared to more recent nutritional methods of treating endocrine disorders. Today, much of the emphasis is on replacing hormones with artificial or phytonutrient analogues, whereas Dr Hanson has designed this formula to provide balance at the very beginning of the chain of events that control almost every function of the body.

Each Tablet Contains:

Manganese

(as Manganese Gluconate) 16.95mg

Vitamin E 8IU

Iodine (as Icelandic Kelp) 114mcg

Alfalfa Juice 150mg

Nucleic Acids and Peptides 150mg

Other Ingredients: Pepsin, Microcrystalline Cellulose, Methyl Cellulose and Magnesium Stearate
