Therapeutic Action:

Vitamin A group of compounds essential for vision, growth, reproduction, differentiation and cell proliferation and integrity of the immune system. More than 90% is stored in the liver.

Vitamin C: It protects the capillary basement membrane. As a nutrient is needed to form collagen and is an effective antioxidant. It prevents scurvy.

Vitamin D facilitates calcium absorption and fixation into the bone. Vitamin D can be stored in adipose tissue and muscle for long periods.

Vitamin E: Works as an antioxidant protecting cell membranes from oxidative damage.

Vitamin B1: Works in the oxidative decarboxylation of pyruvic acid in the formation of acetyl-CoA. It is essential in neurologic function.

Vitamin B2: Establishing the flavin adenine dinucleotide and flavin mononucleotide, involved in numerous oxidation
