

Aerobitine™ was designed to reduce fatigue and promote stamina, strength and endurance. Some of the ingredients have been shown to decrease the buildup of lactic acid or the "fatigue acids".

Aerobitine enhances aerobic exercise performance by increasing nitric oxide levels, which may increase blood flow and circulation. Aerobitine is superior to similar nitric oxide products because it also contains an effective anti-oxidant defense team of nutrients. Aerobitine may support fat loss by increasing glucose uptake by muscle cells, preventing fat cell deposition. Aerobitine is the ultimate anti-fatigue/fat loss support formula.

WARNING: Consult a physician before use if you have been treated for or diagnosed with, or have a family history of, any medical condition(s). Keep out of the reach of children.
