

GENr8™ Vitargo® S2 is the first and only *Super Soluble* form of the fastest recovery and re/fuel carbohydrate ever proven in university research studies. Where other products use maltodextrin and sugars – or even certain types of “starch” – Vitargo S2’s patented IVg technology delivers faster energy absorption, glycogen re/fueling, performance, and insulin response. Vitargo S2 is 100% sugar-free.

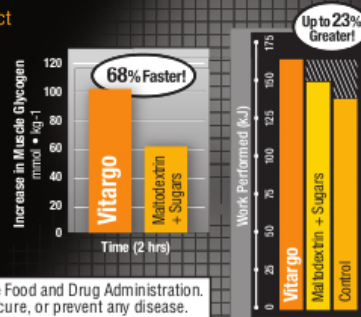

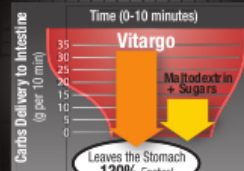

- **Leaves the stomach quicker** 130% faster than maltodextrin + sugars – in the first 10 minutes after ingestion.¹ This leads to less stomach “distress” and faster absorbing muscle energy.
- **Gets into muscle faster** 68% faster glycogen re/fueling than maltodextrin + sugars after intense, exhaustive workouts.²
- **Boosts performance in your next workout** Up to 23% greater maximal endurance (average of 10% greater) 2 hours after exhaustive, glycogen-depleting exercise, compared to maltodextrin + sugars.³
- **Turns off muscle protein breakdown** 178% greater insulin than maltodextrin + sugars, within 10 minutes³ – the most potent, natural way to activate the anti-catabolic signals that spare muscle protein.

GENr8-Specific Research—this *actual* product is university research proven.

VITARGO®**
Fastest Muscle Fuel

PATENTED IVg TECHNOLOGY

INSTRUCTIONS Vitargo® S2 is a different *molecular* carbohydrate – follow directions closely:

HOW

In a shaker bottle

- Fill a shaker bottle with 200 ml (about 6 oz.) of room temperature/tepid water.
- Add 2 level scoops of Vitargo® S2 and shake vigorously for 10-15 seconds.
- Add 500-600 ml (16 - 20 oz.) of *cold* water and shake vigorously for 15 - 20 seconds.

In a blender

- Vitargo S2 can be combined with your favorite post-training blender concoction – protein powder, branched chain amino acids, cinnamon powder, etc. and your favorite liquid.
- For best results add 2 level scoops to a blender drink *while it's on and blending*.

WHEN

Pre- or during exercise/competition

- Mix 1 or 2 level scoops of Vitargo S2 as described above. Note that Vitargo S2's unique molecular viscosity makes it feel thicker than other carbohydrate drinks – experiment and see if you prefer 1 or 2 scoops. Drink to rapid fueling!

Post-training/competition

- Take 2 level scoops as soon as possible after finishing. For optimal recovery, take another serving 30 - 90 minutes after your first serving. Drink to more glycogen!
