Why is TriActive Biotics Junior the #1 Choice for your Kids?

TriActive Biotics Junior utilizes Microencapsulation technology, a process where probiotic powder is covered with a natural protective coating. This enables safe delivery to the optimal location, the small intestine.

This technology was shown in studies to deliver "friendly" live cultures to the target location 5 times greater than brands that aren't microencapsulated.

TriActive Biotics Jr also contains a probiotic that provides important metabolites that balance the pH of the stomach, wards off the growth of unfriendly bacteria, and creates a path of food for the "friendly" probiotic to multiply.

The microencapsulation also gives the product a longer active life span and avoids the necessity of refrigeration.
