## Naturally driven for long lasting health.

Calcium is the primary mineral responsible for strong bones and Magnesium plays an essential role in proper bone mineralization.\* Zinc is involved in the synthesis of collagen in bone tissue while Vitamin D3 helps your body absorb Calcium from the diet.\* Because the body cannot produce these nutrients, a balanced diet, regular exercise, healthy lifestyle choices and adequate intake of Calcium, Magnesium, Zinc and Vitamin D3 can play a role in

maintaining bone health.\* \*\*Adequate Calcium and Vitamin D throughout life. as part of a wellbalanced diet, may reduce the risk of osteoporosis.

are not intended to diagnose, treat, cure or prevent any disease.
