calorie diet.
† Daily Value not established

* Percent daily value PERM is based on a 2 000 2g of the 3g Saturated Fat (13 of the 35 fat calories) are MCTs Medium Chain Triglycerides). MCTs provide energy for digestion and cannot be converted to body fat.

INGREDIENTS: Proto Whey (Micro Peptides from High-DH whey protein hydrolysate), maltodextrin, natural and artificial flavors. MCTs (medium chain triglycerides), SoftPsil (micronized psyllium fiber), fructose, decaffeinated coffee concentrate, soy

CONTAINS: Milk Soy (from lecithin)

source of protein and may be used at any time of the drate foods, depending on individual caloric needs. This product is accurately packed by weight. Some powder prior to use, simply shake or roll the iar.

PURE HIGH-DH HYDROLYZED WHEY PROTEIN

breaking down whole proteins found in food and supplements into smaller proteins, called peptides (Micro Peptides™), and amino acids.*

DH is the Degree of Hydrolysis, which indicates the extent to which the protein has been broken down Higher DH means more rapid and complete absorption.* In order to be absorbed, protein must be hydrolyzed down to amino acids or to the smallest peptides, called di and tripeptides.

concentrates, caseins, soy, and blends are large proteins and naturally contain little to no Micro Peptides™ and no di and tripeptides, Proto Whey is 100% Micro Peptides,™ of which, up to 40% are di and tripeptides.*

Product of USA

TARGETED PROTEIN DELIVERY

The di and tripeptides in Proto Whey® target the PEPT-1 transporter which transports over 8,400 different di and tripeptides. Whole protein digestion relies heavily on amino acid transporters which are far more specific and transport only a fraction of what PEPT-1 transporters do.*

The speed and efficiency of the PEPT-1 transport system allows for faster delivery of protein throughout the body and bypasses other systems that can limit the delivery of amino acids.*

Di and tripeptides carry metabolic information not present in amino acids. High-DH proteins deliver protein into the blood primarily as di and tripeptides whereas whole protein digestion often results in single amino acids.

MORE PROTO WHEY* ADVANTAGES

Requires less breakdown and digestive energy than whole proteins.

Contains 10 grams of essential amino acids per serving. EAAs cannot be synthesized by the body and must be supplied by the diet.

⊕ Employs DEM™ (digestive energy matrix), a unique combination of SoftPsil* micronized psyllium fiber and MCTs (medium chain triplycerides) to provide digestive energy and help maintain optimum intestinal health.

High-DH reduces allergenicity.*

Characteristic response*

Mixes easily - no blender required.

Olndustry-leading, rich and creamy taste profile.
