(HighT)

In a man's brain, there is a complex chain of signals called the hypothalamic-pituitary-gonadal axis. The Testosterone¹ produced in the testes is regulated by this chain. At the onset of puberty, there is a rapid increase in the production of Testosterone. But just as rapidly as it increases at puberty, Testosterone production begins to slow from the age of 30 onward. HighT has been scientifically formulated to help Testosterone levels, leading to increased sexual libido, muscle mass and energy levels. This advanced Hard Core Formulation includes NO3X® Nitric Oxide Booster and Raspberry Ketones to improve endurance, speed recovery time, and maximize strength before, during, and after a workout.***
