[HighT.]

In a man's brain, there is a complex chain of signals called the hypothalamic-pituitary-gonadal axis. The Testosterone[†] produced in the testes is regulated by this chain. At the onset of puberty, there is a rapid increase in the production of Testosterone. But just as rapidly as it increases at puberty, Testosterone production begins to slow from the age of 30 onward. HighT® has been scientifically formulated to help Testosterone levels, leading to increased sexual libido, muscle mass and energy levels. This advanced Hard Core Formulation includes NO3X® Nitric Oxide Booster and Raspberry Ketones to improve endurance, speed recovery time, and maximize strength before, during, and after a workout.†**

Testofen® NO3X® Razberi-K® TriboFen®
