

SugarBalance™ takes a two-pronged approach to weight loss. First, it supports balanced blood sugar levels. This is important since, as blood sugar levels are increased, the body is likely to transport it to fat cells to be converted into fat and stored. **Banabatrims™** and **Promitrim™** are herbal extracts and along with Chromium camosinate have been shown to help promote the transfer of blood sugar into muscle cells (rather than fat cells), and has been demonstrated to help promote weight loss.

Research suggests that **Banabatrims™** along with a nutritious diet and normal exercise program will support a healthy reduction of abdominal fat. The second prong of the approach is to stimulate thermogenesis with the **Thermoprocel Blend**. The herbs in this blend contain natural caffeine and other natural substances that have been clinically demonstrated to promote thermogenesis, the biological process of burning body fat. These same herbs also help control appetite.
