

Research suggests that vitamin D may be your single most important supplemental nutrient. Required for calcium absorption, vitamin D helps maintain healthy bones and teeth. It also supports a healthy immune system, as well as the health of the heart, pancreas, breast, colon and prostate tissues.

Vitamin D is typically obtained from the diet or produced by the skin from sun exposure. However, vitamin D is not abundant in food and people increasingly avoid the sun. Therefore, supplementation is necessary to ensure healthy levels of this key nutrient.*

WARNINGS: For adults only. Do not exceed recommended serving. Consult your health care practitioner prior to use if you have any medical condition, if you have a kidney disorder or hypercalcemia, if you are taking prescription medication, or if you are pregnant or nursing.
