CALCIUM SOFT CHEWS

ACTIVE NUTRITION FOR WOMEN

Calcium may help prevent osteoporosis

Regular exercise and a healthy diet with adequate calcium intake throughout life build and maintain good bone health and may reduce the risk of osteoporosis – a condition characterized by a loss of bone mass that can lead to increased risk of fractures. Osteoporosis affects middle-aged and older people, especially those with a family history of fragile bones in later years. While adequate calcium intake is important, daily intake above 2,000 mg may not provide additional benefits.

*Other age/risk groups include teen and young adult Caucasian and Asian women.

Suggested use: Adults and children 10 years of age and older take one chew twice daily with food or as directed by your physician.

WARNINGS: Do not exceed more than 2 chews in one day. If you are pregnant or nursing a baby, ask doctor before using this product. Do not use if bag is torn or open.

KEEP OUT OF REACH OF CHILDREN
