

Vitamin D is a fat-soluble vitamin that helps maintain healthy bones by stimulating the absorption of calcium in the body. The body has the ability to make vitamin D naturally when exposed to sunlight. During the winter months, however, the body's vitamin D stores are low, increasing the risk of deficiency. Sunscreens also block the body's ability to make vitamin D from sunlight. Vitamin D deficiency can contribute to accelerated bone loss and reduced calcium utilization. Our Vitamin D softgels provide a natural source of this important fat-soluble vitamin.
