

DOPAMINERGIC FAT BURNING CATALYST*

DOPAMITE belongs to a new class of weight management aids known as dopaminergics. Frequent cravings, low energy and a sluggish metabolism may all be associated with low levels of dopamine. Dopamine is a potent neurotransmitter and the driving force of your brain's reward, pleasure and motivation system, also known as "the fat burning control center."*

DOPAMITE helps catalyze fat burning by supporting maximum healthy levels of dopamine and dopamine-dependent (dopaminergic) functions, as well as the functions of the supporting neurotransmitters serotonin, epinephrine (adrenaline) and norepinephrine. All 4 play powerful roles in regulating energy, motivation, satiety (a reduction in hunger after eating) and well-being.*

DOPAMITE's powerful effects are driven by a scientifically engineered blend of actives including highly standardized botanical extracts that have been carefully assessed for potency and efficacy. **DOPAMITE** should only be used by healthy adults who are seeking to achieve significant weight loss.*
