

## **Explosive Lean Muscle Growth with Research-Proven Science!**

the goal of sugar-free N.O. Shotoun® is to promote massive increases in insulinwithout the use of high glycemic index carbohydrates and thus, prevent insulin resistance. Therefore, the N.O. Shotgun® matrix provides a carbohydrate free resistance. Insection, the Not stronger many purpose a properly approach utilizing research-proven compounds to boost insulin that have no adverse effect on blood sugar. This method keeps the body highly sensitive and responsive to insulin resulting in greater lean muscle growth and destruction of fat tissue. Efficient insulin metabolism also allows you to continually access

Making Carbohydrates Obsolete In assembling the pieces of the scientific puzzle, N.O. Shotgun® was formulated to mimic the insulin response generated by high glycemic (high GI) carbs (i.e. sugar) to activate beta-cells and stimulate whole body creatine retention! One of the solutions was to use bis-Picolinato Oxo-Vanadium (BPOV) which is a potent form of chemically altered Vanadium that makes beta-cells super responsive to insulin. Additionally, Beta-Alanine was employed to stimulate research-provin whole-body creatine retention! In fact, these two the unwanted carb-induced side effects - water retention, bloating, and an increase in body fat. You train intensely to get lean, hard, and pumped with crisp, water-free muscle separation, and this is where sugar-free N.O. Shotgun\* out-performs the competition!

VPX scientists used a carb-free approach to achieve greater receptiveness of the beta-cells by taking advantage of the efficient insulin spiking abilities of protein hydrohysates and the potent anabolic amino acid, 1-Leucine. When post-exercise insulin is increased in the presence of protein hydrohysates and leucine, massive amounts of muscle building amino acids flood the blood ingestion of creatine in conjunction with proteins and high-GI carbs is no longer required to stimulate whole-body creatine retention! N.O. Shotgun\* re-wrote cutting edge carb-free muscle science.

# Owoc's Research-Proven 7-Compound-Protocol

to Ignite Synthesis of Lean Muscle 1) Redline's Unparalleled Energy Technology contained only in N.O. Shotgun: is the driving force behind the intensity you need to trigger muscle growth. I'll get real with your without insanely attacking the weights, new muscle prowth just isn't going to occur. Redline" is the neuro-energetic catalyst that uels episodes of psychotic physical and mental intensity necessary to stimulate undesirable. SyntheSize<sup>®</sup> is also ideal for individuals wanting to eliminate stimulants from their diet. Further, the Redline® compounds contained in N.O. Shotgun® were also designed to burn fat at an unprecedented rate. Fat loss records of a 127 and 190 pounds have been set using Redline! See

2) Whey and Casein Protein Hydrolysates: these extraordinary proteins increase insulin production by 110% greater than carbs alone and increase olycogen synthesis by 35%. Whey and Casein Protein Hydrolysates are far superior to intact proteins such as whey, casein and eog for promoting nitrogen to set off a biochemical chain of events that aid in rapid muscle recuperation.

specialized peptides dump into the blood rapidly causing super high blood levels of amino acids and increased production of the powerful anabolic hormone, insulin. These two physiological events result in a potent anabolic (muscle building) response in the body. Shotgun\* and SyntheSize\* both contain copious amounts of Whey and Casein Protein Hydrolysates. These potent protein fractions are comprised of 22% (dutamine Paptide, 41% total pe 78% olutamine while BCAA's and EAA's are the most potent research-proven

3) L-Leucine intermixed with Protein Hydrolysates has an even greater effect on insulin production and muscle growth than Protein Hydrolysates alone. Shotgun is rich in added free form L-Leucine and Leucine Peptides.

4) Cutting Edge High Tech Creatines: It is well documented in research that insulin transports Creatine into muscle tissue. Further, Creatine combined with most anabolic proteins known to man and several cutting edge high tech Creatines such as, Creatinol-O-Phosphate & Di-Na Creatine Phosphate Tetrahydrate that all exert specialized effects in promoting lean muscle growth. strength and ATP Resynthesis!

5) Beta-Alanine radically improves whole body Creatine retention and muscle Carnosine, consequently, vastly improving strength, repetition capability, endurance and lean muscle growth. The synergy of intermixing Protein Hydrohysates, Leucine, Creatine and Beta-Alanine along with resistance training

6) BPOV (bis-Picolinato Oxo-Vanadium) increases the beta cell's sensitivity dynamics of insulin dictate that it is not how much you produce, but more shuttle Creatine, Beta-alanine, Leucine and other muscle energetic compounds into the muscle cell to manufacture more lean muscle. Sixty-seven percent (57%) of Americans are insulin resistant to some dearce. If you have arm dearce of insulin resistance, your ability to use insulin is compromised. Therefore, it doesn't really matter how much insulin your body releases because you are resistant" to insulin's ability to build muscle (anabolism). Less overall carbohydrate consumption (glycemic load) and elimination of high glycemic index dietary carbs along with higher protein intake, BPOV supplementation and increasing muscle mass via resistance training are all factors that increase insulin enshirity and utilization.

7) N.O. + Pumping Agents: Finally, we added some radical new compounds to induce a serious Nitric Oxide Pump. The Nitric Oxide Releasing Factor, GBBEE (Gamma-Butyrobetaine Ethyl Ester) was combined along with the most powerful NO-inducing-Arginine known to science called, ALCA™ (Acetyl-L-Carnitine Arginine HCl) -- making all other forms of Arginine obsolete. Nitric Oxide (N.O.) is the mother of all compounds at filling the muscle (and other body parts) with nutrient dense, blood-engarged hard, dense pumpe! Spiking the Pump even further, "MTB Pump!" (Magnesium Tashinoate B) was combined with the powerful compound BPOV noted for insulin-induced pumps and muscle fulness. And, of course, all of these cutting edge nutrients and compounds work in concert

### \*N.O. Shotaun® was Designed to Enhance

. Unparalleled Training . Mental Acuity and Focus . Whole Body Creatine

. Insulin Sensitivity and . Insulin Mediated Lean Mass

· Meltdown/Redline-Induced . Muscle Fullness and **Blood-Engarged Pumps** . Strength, Power, Endurance & Recuperation . Criso, Water-Free

Muscle Separation . Blood Flow & Nitric Oxide (N.O.) Levels . COP is Resistant to Creatinine Degradation in the gut

I you are pregnant or nursing or have a medical condition. This product contains caffeine and should not be used with any other affeine and/or stimulant containing products. This product is ntended for use by healthy individuals only. KEEP OUT OF REACH OF CHILDREN

Muscle energetic compounds within Shalgunt may cause a lingling Drink an additional one half (\$72) ounce of water for each pound of body weight. Phenylketonurics: Contains Phenylalanine.

SUPPLEMENT FACTS

Proprietary Branched Chain Ethyl Ester Amino Acid Matrix

Vitamin B-6 (Pyridoxine HC1-250%

Hordenine HCI Folate jas Folic Acid) - 189%

Pewer, Speed, Strength and Endurance Matrix

Vitarion B-6 (f Creatine Magnesium Chelate

RECOMMENDED USE: Do not use N.O. SHOTGUN v.3º with

REDLINE\* or Meltidewer\* or any other products containing caffeins or other stimulants. Wis one scoop of N.O. SHOTOUN v.2\* with it to

require several scoops, N.O. SHOTGUN v.3" is extremely power and requires only one scoop. The N.O. SHOTGIAN v.3" and N.O. SYNTHESIZE" supplement strategy represents the most advanced and latest research on muscle growth and athletic performance.

Caution: As with all dietary supplements, do not use this product

0 cunces of water or your favorite beverage. Drink N.O. SHOTGUN x.3° prior to any type of athletic event or resistance training. For enhanced results consume K.O. SYMTHESIZE\* cluring and after training. Unlike other N.O. Winto Oxido Supplements which may

Redlino\* Energy & Holtdown\* Fat Burning Technology

warridinopropionio Acid (SPA)

Caffeine Anhydrous
