Retina and Macula Health

The **retina** in the eye "sees" light and transforms it into nerve impulses that the brain interprets as vision. Maintaining healthy blood vessels and blood flow is the key to proper retinal function.

The **macula** is the central part of the retina where light is focused. Carotenoids (lutein and zeaxanthin) found in the macula are critical to protecting the retina from ultraviolet (UV) light and free radicals.

Advanced Ginkgo Extract

- Made from premium Ginkgo leaves
- Standardized to 24% Ginkgo flavone glycosides and 6% terpene lactones
- Over 20 active and coactive constituents
