NOTE: If you are pregnant, may become pregnant or breastfeeding, consult your health care professional before using this product.

Do not use if either tamper-evident seal is broken or missing.
Keep out of the reach of children.

Docosahexaenoic acid (DHA) is an *omega*-3 fatty acid and functions as an important component of brain tissue. DHA plays a significant role in cerebral brain development and retina function in the eye. DHA supplementation is especially important during fetal development and infancy. Pregnant mothers transfer DHA directly to the fetus to support rapid brain and retina development. During infancy, DHA is also supplied via mother's breast milk for continued cerebral development. Some people have lower concentrations of DHA due to low-fat or vegetarian diets.*
