

Bifidobacterium Longum Subsp. Infantis M-63

Bifidobacterium longum subsp. infantis (*B. infantis*) is associated with improved growth, the development of intestinal membrane integrity, and is critical for developing immune function.*

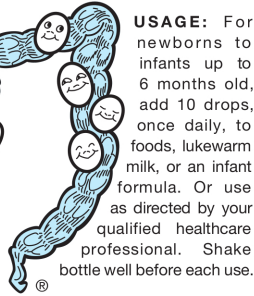

B. infantis is the predominant intestinal organism found in breast-fed infants.* *B. infantis* M-63 was isolated from a healthy infant and clinically proven to colonize the intestines of infants.*

B. infantis is the only bacterial species able to take up and metabolize all Human Milk Oligosaccharides (HMOs) which allows *B. infantis* to outcompete other bacterial species.*

Jarro-Dophilus® Infant is formulated with Medium Chain Triglycerides (MCTs), which are naturally present in breast milk and are more easily absorbed by the newborn's immature digestive system.*

The Developing Intestinal Microflora of Newborns Is Up to 90% *B. Infantis*
