

FIBROVERA is a proprietary blend of microbial and botanical components selected for clinical efficacy. Certain hormonal imbalances are linked to the activation of excess fibrin which may lead to abnormal cell formation in the breast and uterine tissue. *FIBROVERA may be taken to safely regulate hormonal balance and modulate inflammation while promoting the reduction of fibrin. FIBROVERA also provides fibrinolytic (fibrin eating) enzymes and cofactors selected to address excess fibrin

buildup; the primary components of endometriosis and fibroids.

SUGGESTED USE: Take 1 capsule with 8 oz. of water between meals or as directed by your healthcare practitioner.

WARNING: Do not take this product without the consent of your physician if you are currently taking anti-coagulants or if you are pregnant or nursing.
