

Micronized **GL3 L-Glutamine™** represents a leap forward in Glutamine supplementation. **GL3** uses a state-of-the-art Particle Micronization Technology (PMT™). Each tiny particle of **GL3** is 20 times smaller than regular Glutamine powder. This allows for ultra-fast absorption and utilization. †

Glutamine represents over 63% of the amino acid content in the amino acid pool of muscle tissue. Intense training and exercise put greater demands on your body for Glutamine, making it a conditionally essential amino acid. †

Glutamine is the most common amino acid in the body and is key to the metabolism and maintenance of muscle tissue. Glutamine is also the highest concentrated amino acid in the muscle cell and acts as a primary shuttle for nitrogen from the bloodstream to inside the muscle cell. Glutamine has a multifaceted role in human nutrition and is essential for the support of muscle tissue and immune function. †
