GNC

WOMEN'S Prenatal Program

Nutritional support for you and your baby before, during and after pregnancy. This program features a balanced nutritional blend of vitamins, minerals and antioxidants to supplement a healthy diet.

- ✔ **Folic Acid**
Provides 1000 mcg of folic acid, which is critical during the earliest weeks of pregnancy when a baby's organs are forming. Adequate intake of folic acid in a healthy diet before and during early pregnancy may reduce the risk of birth defects of the brain and spinal cord. Also required for cell growth and DNA formation.*
- ✔ **Algae-Based DHA**
Features DHA from marine algae. Supplementing with DHA, an omega-3 fatty acid, helps pregnant and nursing mothers replenish the DHA necessary for a baby's healthy brain and eye function development.*
- ✔ **Calcium**
1200 mg of calcium, which is vital during pregnancy, especially during the third trimester when fetal bones begin to calcify. If a mother's calcium level drops, her body can pull calcium from her bones, which can result in loss of bone density.*
- ✔ **Iron**
Contains 18 mg of iron. Iron plays a crucial role in the formation of healthy red blood cells, which are essential to support placental and fetal needs as a mother's blood volume increases.*
- ✔ **Antioxidants**
Has antioxidants for protection against harmful free radicals that can destroy healthy cells.*
