

Vitamin B5 (Pantothenic Acid)

In addition to being utilized in the Krebs cycle, Pantothenic Acid is involved in the production of hematocrit (red blood cells) and adrenal hormones. Pantothenic Acid is quickly converted in Coenzyme A, which is essential to turn food into energy. Pantothenic Acid works with the other B vitamins to help in the production of ATP which fuels the cells in the body, giving them energy. According to studies, vitamin B5 may help maintain cholesterol levels and healthy triglycerides levels in the body that are already in normal range.**
