

Citrulline Malate

Supplemental citrulline malate is a salt form of the amino acid. The malate, or malic acid, is found in fruits such as apples and enhances the effects of citrulline. Malic acid takes part in aerobic cellular respiration where oxygen and a carbon compound (acetyl Co-A) are used to produce immediate energy and CO₂ in the mitochondria of the cell. This is called the Krebs cycle. Malate conditions the recycling of lactate and pyruvate promoting efficient energy production and protecting muscles from fatigue.**
