*In a randomized, double-blind, placebo controlled crossover study, 19 volunteers consumed 3 doses of resVida® (30 mg, 90 mg, 270 mg) and a placebo at weekly intervals. Flow-mediated dilatation (FMD) of the brachial artery was measured one hour after ingestion of each treatment and was significantly increased at all 3 doses relative to placebo. 30 mg of resVida® demonstrated 2.5% greater increase in FMD relative to placebo.
