

* An 8-week, randomized, double-blind, placebo-controlled study of 33 healthy men compared the effectiveness of this proprietary blend of whey protein and leucine vs. an isocaloric carbohydrate placebo consumed before and after resistance training. Subjects consuming the leucine-whey protein supplement experienced greater increases in muscle strength than those on the placebo. Leucine-whey protein supplementation also increased muscle cross-sectional area from baseline.

* When used in conjunction with an exercise program.

* In an 8-week, randomized, double-blind, placebo-controlled study of 30 healthy male volunteers comparing 1 set resistance training (RT) + active or carbohydrate placebo to 2 sets RT alone with no supplement, the active group showed equal gains in maximal muscle strength and muscle endurance compared to the control group.

* In a randomized, double-blind crossover clinical trial that included 20 recreationally trained, healthy male subjects, those taking 10 g whey protein isolate plus 10 g leucine immediately post-workout showed significant increases in key protein (p70S6k & p956) associated with muscle protein synthesis.
