MATRIX**

MADE OF GOLD
MEDALLION ALBION®
CHELATED MINERALS

15 GRAMS OF CLUSTER
DEXTRIN® PER SERVING

10 GRAMS OF CARB10™
PER SERVING

MINIMAL BLOOD-SUGAR & INSULIN RESPONSE†

Recognizing the need to provide athletes with a high-performance carbohydrate-based supplement, in 2012 **Gaspari Nutrition®** introduced **Glycofuse®** using Highly Branched Cyclic Dextrin (HBCD) as its main ingredient. Unlike other simple carbs, **Cluster Dextrin®** is low glycemic and does not cause a rapid rise in blood glucose levels while providing sustained energy over prolonged aerobic and anaerobic physical activities. Providing rapid gastric emptying and avoiding bloating common to many carbohydrate-based supplements, makes this novel compound ideal for all types of exercises that require a clean source of carbs for energy and endurance.†

Gaspari Nutrition® has further improved on its original **Glycofuse®** by adding **Carb10™** to the formula, another novel ingredient with very low glycemic index and low insulinemic from pea starch carbohydrates. It is also fortified with **Albion® chelated minerals**, making it the gold standard for high performance carbohydrate-fuel supplements that can be used to increase endurance and improve performance in all types of physical activities and sports.†
