

Resveratrol is a polyphenol with powerful antioxidant properties found in red wine. Resveratrol has been studied for its ability to activate the "longevity gene" or "SIRT1" which plays a role in aging related biological processes such as how cells react to stressors. Resveratrol is a polyphenol naturally found in the skin of red grapes, certain berries, and other plants. Recent research has shown that Resveratrol can help to support healthy cardiovascular function and is best known for its cellular anti-aging properties, as well as for its ability to promote a healthy response to biological stress. Red Wine Extract is designed to contain some of the antioxidant nutrients found in red wine. Important components such as resveratrol, polyphenols and ellagic acid along with Vitamin C provides antioxidant support. Hi-Tech formula uses the bioactive trans-form of Resveratrol with full-spectrum polyphenols and Cyclosome™ Liposomal technology, using natural liposomes (made with a good fat) to protect the Trans Resveratrol through digestion, plus cyclodextrin (made with a natural starch) to increase bioavailability so you ABSORB MORE!†
