

Hi-Tech Pharmaceuticals Vitamin D3 utilizes Advanced Cyclosome™ Technology creating the most advanced Vitamin D3 complex available today with a vortex of solubility on a microscopic level for increased absorption and a more effective vitamin. We took liposomal technology a step further and enhanced solubility for maximum bioavailability. Vitamin D3, often referred to as the "Sun Vitamin", is an essential nutrient that supports the immune system, strength and power in muscles, helps calcium absorption to develop strong bones and teeth, and helps with overall well-being and mood. Combining Vitamin D3 with other nutrients supports absorption in the body as well. Vitamin D3 is versatile and pretty important stuff, so don't get low!†

Advanced Cyclosome™ delivery technology encompasses naturally derived Vitamin D3 into a liposome hydrophilic complex to create a vortex of enhanced solubility and optimal bioavailability. Cyclosome™ liposomal delivery utilizes natural ingredients to preserve the high quality Vitamin D3 ingredient through digestion, protecting the active ingredient, while increasing bioavailability.†
