

Bioidentical Polypeptides LD (BP) is a proprietary colostrum extract with hundreds of bioactive peptides at a minimum of twelve percent (12%) level. This is 10 to 40 times more than is present in colostrum. BPs help activate and control the production and regulation of cytokines that activate macrophages, natural killer cells and T-cells. These signaling BPs provides the instructions for the body to maintain immune homeostasis.†

Through proprietary technologies, the BPs are extracted and added to our first milking Colostrum-LD to produce Bioidentical Polypeptide. Our proprietary LD Liposomal Delivery™ system protects the bioactive components during transit to the small intestine for optimal absorption.†
