

Colostrum-LD® contains a minimum of

- 25-30% Immunoglobulins
- 1.5% Lactoferrin
- 1.5% Growth Factors and
- 3.5-5% Proline-rich Polypeptides

Colostrum-LD® is collected from the first milking of pasture-raised Jersey and Guernsey dairy cows not supplemented with rBST, BSE and tested antibiotic-free. It is micronized and lactose-reduced. Proprietary Liposomal Delivery (LD) protects the living immune and growth factors from oxidation during storage, prevents their digestion while transiting through the stomach, and delivers these vital nutrients throughout the body and across the blood-brain barrier.
