PER SERVING

Supplement Use: Mix entire packet of Hydration Fuel with 12 oz. of water prior to your activity. Drink multiple servings daily as necessary to keep your body hydrated.

Hydration Fuel is a third-party testing performance tested electrolyte blend intended to be used by all ages.

FAMILY FIRST

At Ryno Power, we are committed to using the highest quality, natural, and safe ingredients. We wanted to offer a performance hydration drink that you can trust, drink everyday, and feel comfortable giving to your children and loyal members. We have all the best ingredients you need to compete at the highest level.*

BCAA'S

When you are training to develop a stronger, more powerful body, it is essential to stimulate and fuel your muscles at the cellular level. BCAA's are a safe and natural way to reduce muscle fatigue, speed recovery, decrease the loss of other amino acids during exercise, and help the body absorb protein.*

ELECTROLYTES

Sweating is your body's natural way of cooling itself. If you are lacking Electrolytes, your body will stop sweating, allowing core temperature to rise, and in extreme cases, causing heat stroke. Electrolytes are essential for keeping your body functioning properly during any activities you are involved in throughout the day.*

D-RIBOSE

D-Ribose is an all natural ingredient and already occurring in your body. D-Ribose fuels ATP which acts as the motor of your cells. When our bodies are stressed by exercise, our cells cannot recover until enough Ribose is made to stimulate ATP. D-Ribose allows your cells to function at a high level because they don't need to look for fuel*.

WHAT IS GLUTAMINE?

Glutamine is a naturally occurring amino acid in your body. During intense training, Glutamine levels are greatly depleted, which decreases strength, stamina and recovery. With 2.5g of Glutamine in Hydration Fuel, we keep your levels where they need to be for maximum performance.*

BEFORE: Hydrate and fuel your body with the proper nutrients before you exercise.

DURING: Keep your body functioning at optimal levels with electrolytes and carbs.

AFTER: Repair and replenish the nutrients that were lost in your activity.
