Does not contain gluten.

WCP900-1

Whey Cool™

Proprietary Non-Denatured Whey Protein

Unflavored and Unsweetened

- ✓ 3 g Immunoglobulins
- ✓ 1.2 g Lactoferrin
- ✓ Unique Low Heat Processed
- ✓ High in Glutathione Precursors
- ✓ rBGH Free

Dietary Supplement

For Professional Use Only

900 Grams

Ingredients: Proprietary whey protein concentrate (Proserum®).

Contains: Milk.

Recommended Use: As a dietary supplement, mix 30 grams (approx. one heaping scoop) in eight ounces of water or any other beverage per day, or as directed by your health care practitioner.

Whey Cool™, a proprietary non-denatured native whey protein concentrate, is produced to maintain the full range of all the fragile immune boosting and regenerative components naturally present in fresh raw milk. Whey Cool™ is produced using proprietary filtration and drying which involves minimal processing. This unique production method ensures that the whey is not subjected to temperatures that would destroy the original components. We do not use cross-flow filtration, microfiltration, hydrolyzation or ion exchange methods which denature the original proteins.

This full range, biologically active, complete amino acid profile native protein naturally contains an exceptional amount of the critical glutathione precursor covalent bonded cysteine. Additionally it contains the full range and exceptional levels of the most important protein components, which are lactoferrin, immunoglobulins, serum albumin, active peptides, glycomacropeptides and growth factors.

The milk harvested for this product comes from cows that graze year-round on pesticide-free and chemical-free natural grass pastures. Milk from grass-fed cows has many times higher levels of CLA and contains a proper balance of essential fatty acids. The milking cows are never fed grain or subjected to any growth hormones, chemicals, antibiotics, genetically modified organisms, hyperimmunization or injected pathogens.

All other commercially available whey proteins use high heat pasteurization on the milk and whey. High heat does irreversible damage (denaturation) to the majority of the components of milk and may cause intolerance even in individuals who have no history of milk allergies.
