Whey Cool™

Proprietary Non-Denatured Whey Protein

Natural Chocolate

- ✓ 3.2 g Immunoglobulins
- ✓ 1.3 g Lactoferrin
- ✓ Unique Low Heat Processed
- ✓ High in Glutathione Precursors
- ✓ rBGH Free

Dietary Supplement

For Professional Use Only

900 Grams

Supplement Facts

Serving Size 30 grams (approx. one scoop)

Servings Per Container 30

Lactoferrin	1.3 g	†

*Percent Daily Values are based on a 2,000 calorie diet.

†Daily Value not established.

Other Ingredients: Natural chocolate powder, certified organic stevia leaf extract powder, natural vanilla flavor, vegetable cellulose.

Contains: Milk.

STORE IN A COOL, DRY PLACE.

Recommended Use: As a dietary supplement, mix 30 grams (approx. one scoop) in eight ounces of water or any other beverage per day, or as directed by your health care practitioner.

Whey Cool™, a proprietary non-denatured native whey protein concentrate, is produced to maintain the full range of all the fragile immune-boosting and regenerative components naturally present in fresh raw milk. Whey Cool™ is produced using proprietary filtration and drying which involves minimal processing. This unique production method ensures that the whey is not subjected to temperatures that would destroy the original components. We do not use cross-flow filtration, microfiltration, hydrolyzation or ion exchange methods which denature the original proteins.

This full range, biologically active, complete amino acid profile, native protein naturally contains an exceptional amount of the critical glutathione precursor covalent-bonded cysteine. Additionally, it contains the full range and exceptional levels of the most important protein components, which are lactoferrin, immunoglobulins, serum albumin, active peptides, glycomacropptides and growth factors.

The milk harvested for this product comes from cows that graze year-round on pesticide-free and chemical-free natural grass pastures. Milk from grass-fed cows has many times higher levels of CLA and contains a proper balance of essential fatty acids. The milking cows are never fed grain or subjected to any growth hormones, chemicals, antibiotics, genetically modified organisms, hyperimmunization or injected pathogens.

Most other commercially available whey proteins use high heat pasteurization on the milk and whey. High heat does irreversible damage (denaturation) to the majority of the components of milk and may cause intolerance even in individuals who have no history of milk allergies.
