

Directions: As a dietary supplement, adults take one (1) capsule daily, or as directed by a health care professional.

DHEA is often referred to as the "youth hormone" since the body's level of DHEA decreases with aging. DHEA may play a protective role in organ health and the deterioration associated with aging. There is growing evidence which links DHEA levels and the onset of degenerative diseases like atherosclerosis, heart disease, diabetes, and stroke to name a few. It may also assist with fat loss, muscle building, and energy levels.†
