

Benfotiamine (S-benzoylthiamine-O-monophosphate) is a derivative of thiamin, belonging to the family of compounds known as "allithiamines." Benfotiamine is fat-soluble and more bioavailable and physiologically active than thiamin.* Benfotiamine raises the blood level of thiamin pyrophosphate (TPP), the biologically active co-enzyme of thiamin, and stimulates transketolase, a cellular enzyme essential for maintenance of normal glucose metabolic pathways.*

Helps maintain healthy cells in the presence of blood glucose*

Controls formation of Advanced Glycation Endproducts (AGEs)*

Normalizes cellular processes fueled by glucose metabolites*

BenfoPure is a registered trademark of Hamari Chemicals Ltd., Japan.
