IDEBENONE 200

DIETARY SUPPLEMENT

Positively Affects Mitochondrial Function*

200 mg • 50 Capsules

Idebenone. Studies have shown Idebenone to be an effective support for cardiac and all mitochondrial issues such as MS, Friedreich's ataxia and Leber's eye disease, macular degeneration, and ALS (Lou Gehrig's Disease). Idebenone has also been shown to support the Corpus callosum, the contralateral axonal fibers known as white matter that connect the left and right cerebral hemispheres of our brain. As such, idebenone demonstrates an ability to support higher brain functions, memory deficits and brain toxicity issues. Idebenone is highly recommended by the modern medical community for those taking statin (high cholesterol) drugs.*
