

High Absorption Magnesium contains elemental magnesium chelated with the amino acids glycine and lysine. As an essential dietary mineral, magnesium plays many important roles which include: helping cells produce metabolic energy, supporting optimum nerve function, helping muscles relax properly and maintaining a healthy heartbeat.* Glycine has been shown to be an efficient carrier for minerals that facilitate absorption in the intestinal tract.* Glycine is used by the body to form collagen, a key protein in cartilage and connective tissue.* Lysine is an essential amino acid that assists gastric function.*
