

Q+Kinase features the nutrient duo of co-enzyme Q10 (CoQ10) and nattokinase, both contributing unique attributes to support the heart and enhance circulatory health. CoQ10 is necessary for energy generation from cellular mitochondria, and heart muscle fibers have the highest density of mitochondria and highest CoQ10 concentration of any tissue. Nattokinase is an enzyme derived from "natto," a fermented soy food popular in Japan for centuries. The protein-digesting activity of nattokinase together with the versatile bioenergetic and antioxidant properties of CoQ10 provides an unparalleled approach to cardiovascular health.

Heart and blood vessel support*

Helps maintain already normal blood pressure*

Promotes energy production in cells*
