no unpleasant aftertaste

convenient single-serving packets

should not affect blood sugar levels
in most individuals

monk fruit contains Mogroside V, an active
ingredient which is 300x sweeter
than cane sugar and low in calories

WHAT IS STEVIA?

Stevia extract is derived from the leaves of a small shrub of the chrysanthemum family called stevia. It grows wild in Paraguay and Brazil and is cultivated in Japan and China.

Stevia extract contains steviolosides, a substance that makes it unique among over 300 species of stevia plants. The extract is calorie-free and should not affect blood glucose levels in most individuals. Unlike the whole herb, the extract does not have a pronounced aftertaste.

Monk Fruit, also known as Luo Han, comes from the plant *Momordica grosvenori*. It contains an active ingredient called Mogroside V that is intensely sweet. Monk Fruit is 300 times sweeter than common table sugar or sucrose. It is low calorie and low glycemic, and should not affect blood sugar levels in most individuals.
