THE BENEFITS OF HYBRID CREATINE COMPLEX

GNC Pro Performance® Hybrid Creatine Complex was developed by GNC scientists to help boost muscle strength, improve training and athletic performance, enhance recovery and outperform regular creatine supplements.* With this formula, you get superior results during and after your workout. Best of all, it mixes instantly with a spoon and can be stacked with any supplement.

Your muscles can only grow when your body retains enough nitrogen. Some of the most effective sources of nitrogen for fueling lean muscle are creatine and amino acids. The specially manufactured Hybrid Creatine Complex formula delivers an anabolic creatine and amino acid spike into your bloodstream when you need it most. This spike provides nitrogen and subsequently creates a nitrogen-rich environment needed for maximizing lean muscle mass. GNC Pro Performance® Hybrid Creatine Complex helps spike insulin and drive creatine into the muscles – specifically where it needs to be to fuel high-intensity athletic performance. This scientifically advanced complex has been clinically shown to dramatically increase bench press, vertical jump and 100 yard dash performance!†*

NITRO-FACTOR™ – MAXIMIZE MUSCLE BUILDING†

The full muscle building potential of a GNC product is based on its total nitrogen content – so the more nitrogen a product has, the stronger it will perform. Pro Performance® Hybrid Creatine Complex with a Nitro-Factor™ of 16 grams helps fuel performance and anabolism.*

Products bearing this logo have been tested for banned substances by HFL Sport Science, a world-class anti-doping lab. *Product was tested for over 145 banned substances on the 2013 World Anti-Doping Agency (WADA) Prohibited List via HFL skip lot testing protocol #ICP0307. See gnc.com for more information.

Eight weeks of supplementation with the creatine and carbohydrate blend in this formula in male collegiate athletes during off-season training produced significant increases in several performance variables compared to those athletes taking 34g carbohydrate formula alone. Subjects taking the creatine and carbohydrate blend in this formula displayed increased performance in the bench press, vertical jump and 100 yard dash compared to those taking the carbohydrate formula alone.*

†When used in conjunction with regular resistance training.
