OMEGA-3 KRILL OIL

MAY REDUCE THE RISK OF CORONARY HEART DISEASE‡

Heart Health

Omega-3 Krill Oil contains omega-3 fatty acids DHA and EPA. Research has shown the DHA and EPA may reduce the risk of coronary heart disease.‡

Antioxidant Protection

Unique antioxidants, including astaxanthin, may protect you from damaging free radicals. Krill oil boasts a profile of powerful antioxidants not seen in standard fish oil.*

Phospholipid Complex

"Unlike fish oils, krill oil carries omega-3s in the form of phospholipids - liposomes or little packages that deliver the fatty acids directly to your body's cells. Standard fish oils lack this phospholipid complex."

"These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

C-KCS-0140

WHAT IS KRILL OIL?

Antarctic Krill

Krill oil contains omega-3 fatty acids, antioxidants, and a phospholipid complex. Krill are small prawn-like creatures that feed the world's most mammoth animals...the great whales. Great whales gulp down huge quantities of krill to provide the energy they need to fuel their massive bulk.

Sustainability

Krill is one of the largest biomasses in the ocean. It is one of the most abundant and sustainable organisms on the planet. Krill represent a renewable, sustainable and positive nutrition source.

This product comes from a fishery that has been independently certified to the MSC's standard for a well-managed and sustainable fishery. Please visit www.msc.org for more details.
