Standardized to contain 2.4% allicin (11 mg)	
Daily Value not established	

THIS PRODUCT HAS A BLENDED GARLIC EXTRACT WHICH IS NOT A GARLIC OIL OR GARLIC EXTRACT

Enzymatic[®]
Therapy

Garlinase[®]
FRESH

Not all the rewards of fresh garlic.
• Contains 100 mg of active fresh garlic
• Enteric-coated tablets reach the small intestine so you get garlic where you need it
• Clinically proven to support heart health
• Contains the amount of garlic recommended by the German Commission E with just 1 tablet daily
• And keep your fresh breath, too!

Why Fresh Garlic?
• Nearly every clinical trial showing that garlic supplements support heart health used fresh garlic extracts
• Allicin is the key active compound found in fresh, not aged, garlic. Allicin acts as an antioxidant and helps support cardiovascular health. In fact, the German Commission E states that allicin provides the most significant health supportive benefit

In fact, Aged Garlic:
• Yields no beneficial allicin
• Results in the stomach, destroying any chance of allicin reaching the bloodstream
• Is virtually aged to an accelerated process, destroying garlic's most beneficial compound
• You see the difference? It's not just the name. It's the science behind it.

Garlinase Fresh is a natural, powerful, and safe way to support heart health. It contains the highest concentration of allicin, the active compound in garlic, which is known to support heart health. It is also a natural source of antioxidants, which help to protect the heart from damage.
