

Colostrum BioPRPs capsules are a proprietary bovine colostrum extract with hundreds of bioactive peptides at a minimum of twelve percent (12%) level. This is 10 to 40 times more bio-active peptides than can be found in regular bovine colostrum dietary supplements. Polypeptides help activate and control the production and regulation of cytokines. These signaling polypeptides provide the instructions to the body to maintain a healthy immune homeostasis.[†]

Bioidentical polypeptides are extracted from bovine colostrum through a proprietary process to produce colostrum PRP's.

Our proprietary LD Liposomal Delivery protects the bio-active components during transit to the small intestine for optimal absorption.[†]
