

Within a man's body, there is a complex chain of signals called the Hypothalamic-Pituitary-Gonadal Axis. The Testosterone produced in the testes is regulated by this chain. At the onset of puberty, there is a rapid increase in the production of Testosterone. But just as rapidly as it increases at puberty, Testosterone production begins to slow from the age of 30. That's why a supplement that helps boost Testosterone within the normal range can be beneficial. Test-Rx™ has been scientifically formulated to help Testosterone levels leading to increased sexual libido, muscle mass and energy levels. This advanced formulation includes twelve known Testosterone Boosters to improve libido, speed recovery time, and maximize strength before, during, and after a workout.†

DIRECTIONS: As a dietary supplement, take 1 tablet 2 times daily. Do not exceed 4 tablets per day.
